

## Output Screenshots

Smart Lender loan eligibility prediction system was successfully developed and tested using a Flash Based web application. The application accepts user input such as applicant income, education, loan amount, credit history and property area. Based on the entered details, the trained machine learning model predicts whether the loan application is likely to be approved or rejected.

## Home page

The home page of the Smart lender application provides an overview of loan approval prediction system. It introduces the purpose of application allows users to navigate to the loan prediction form by clicking the Get started button.

## Loan application form

The loan application form allows users to enter applicant details such as gender, marital status, education, employment status, income, loan amount, loan term, credit history, and property area. These details are used by machine learning model to predict loan eligibility.

The image shows a web form titled "Smart Lender" with the subtitle "AI-Based Loan Eligibility Prediction System". The form is set against a blue gradient background. It contains the following fields:

- Gender:** A dropdown menu with the text "Select Gender".
- Marital Status:** A dropdown menu with the text "Select Status".
- Number of Dependents:** A text input field with the placeholder "Enter dependents".
- Education:** A dropdown menu with the text "Select Education".
- Self Employed:** A dropdown menu with the text "Select Option".
- Applicant Income:** A text input field with the placeholder "Enter applicant income".
- Co-applicant Income:** A text input field with the placeholder "Enter co-applicant income".
- Loan Amount:** A text input field with the placeholder "Enter loan amount".
- Loan Term (Months):** A text input field with the placeholder "Enter loan term".
- Credit History:** A dropdown menu with the text "Select Credit Status".
- Property Area:** A dropdown menu with the text "Select Area".

At the bottom of the form is a blue button with a magnifying glass icon and the text "Check Loan Eligibility". A footer at the very bottom reads "© 2026 Smart Lender | Machine Learning Loan Prediction System".

## Loan approval prediction

After submitting valid applicant details, the machine learning model analysis the input and predicts the loan eligibility. In this case the application successfully predicts the loan is approved and displays a confirmation message to the user.

This image shows the same "Smart Lender" form as above, but with sample data entered into the fields:

- Gender:** Male
- Marital Status:** Married
- Number of Dependents:** 1
- Education:** Graduate
- Self Employed:** Yes
- Applicant Income:** 30000
- Co-applicant Income:** 11500
- Loan Amount:** 150000
- Loan Term (Months):** 12
- Credit History:** Good
- Property Area:** Urban

The "Check Loan Eligibility" button remains at the bottom. The footer "© 2026 Smart Lender | Machine Learning Loan Prediction System" is also present.

## Prediction Result

The system processes the entire details and displays the loan eligibility prediction based on the train Michel morning model. This confirms that the application performs real time loan eligibility prediction successfully.

## Conclusion

The **Smart Lender – Loan Eligibility Prediction System** demonstrates how Machine Learning can be effectively applied to automate and improve the loan approval process in the banking and financial sector. By analyzing applicant information such as income, credit history, loan amount, employment status, education, and other relevant factors, the system accurately predicts loan eligibility, enabling faster and more consistent decision-making.

The integration of the trained Machine Learning model with a Flask-based web application provides a simple, interactive, and user-friendly platform for real-time loan eligibility prediction. The system not only displays the loan approval or rejection result but also offers meaningful suggestions to applicants whose loans are rejected, helping them understand areas for improvement.

Overall, the project reduces manual effort, minimizes human bias, improves prediction accuracy, and supports financial institutions in making data-driven lending decisions. It highlights the practical use of Artificial Intelligence and Machine Learning in solving real-world banking problems while enhancing operational efficiency and customer experience. The Smart Lender system serves as a scalable foundation that can be further enhanced with advanced Machine Learning models, larger datasets, cloud deployment, and stronger security features to meet the evolving needs of modern financial institutions.
